Press Announcement

Kompingo Announces New Partnership with Agent Ecosystem Security Leader [Reco](#)

[Kompingo](#) is proud to announce a new strategic partnership with [Reco](#), a leader in Agent and Application Ecosystem Security.

The partnership further strengthens Kompingo's growing cybersecurity portfolio, bringing one of the industry's most advanced agent and application ecosystem security platforms to partners and organisations across the UK and EMEA.

As organisations continue to adopt more AI agents and third party applications, visibility and control have become increasingly difficult. Unlike traditional security tools that focus on individual applications, Reco provides a complete view of an organisation's entire agent and application ecosystem from a single platform. Reco helps security teams uncover hidden risks, monitor identities and permissions, and enable the safe deployment of AI by providing the context and control to govern autonomous activity without disrupting business operations. .

Reco continues to build significant momentum within the cybersecurity market. CRN recently named Reco one of the **10 Hottest AI Security Startups of 2026**, following the launch of **Reco Agent Security** to help organisations secure AI agents and prevent data exposure, as well as a **\$30 million Series B funding round** led by Zeev Ventures.

Through the partnership, Kompingo and Reco will collaborate on partner enablement, brand awareness initiatives, educational content, in-person events and strategic introductions to help organisations better secure their rapidly expanding agent and application environments.

"SaaS applications have transformed the way organisations operate, but they've also introduced an entirely new security challenge," said Toby Caton, Director at Kompingo. "Reco gives organisations the visibility and context they need to confidently secure their agent and application ecosystems, from identities and permissions to embedded AI agents. Their recent innovation around AI agent security and continued market recognition makes Reco an exciting addition to the Kompingo portfolio. We're looking forward to building awareness across the UK and EMEA together."

The partnership reflects Kompingo's continued commitment to bringing innovative, high-growth cybersecurity vendors to the UK and EMEA channel, helping partners and customers stay ahead of emerging cyber threats with best-in-class security technologies.

About Reco

Reco is used by Fortune 500 companies to secure application ecosystems so they can enable agents with confidence. The Reco Platform discovers every agent, app, and identity across enterprise environments, prioritizes real risk over raw alert volume, and remediates before exposure becomes a breach. With more than 260 app integrations and 1,000 detection controls, Reco deploys in 48 hours. The company has raised \$85 million in funding from Insight Partners, Zeev Ventures, boldstart ventures, Angular Ventures and Redseed. Learn more at www.reco.ai and follow us on [LinkedIn](#).
